Printed in Great Britain

Contents of Volume 69

Number 1, November 1977

LANKS, K. W., A Prediction of mRNA Hybridization Kinetics Based on Polypeptide Abundances 1

WISSEL, C., On the Advantage of the Specialization of Flowers on Particular Pollinator Species 11

DIBROV, B. F., LIVSHITS, M. A. and VOLKENSTEIN, M. V., Mathematical Model of Immune Processes. II. Kinetic Features of Antigen–Antibody Interrelations 23

LEUNG, L. S. and FREEMAN, W. J., The Spatial Temporal Response of the *Limulus* Eye Neural Set 41

COHEN, M. S., The Cyclic AMP Control System in the Development of *Dictyostelium discoideum*. I. Cellular Dynamics . . . 57

LUBLINER, J. and BLUM, J. J., Analysis of Bend Initiation in Cilia According to a Sliding Filament Model 87

SZABADI, E., A Model of Two Functionally Antagonistic Receptor Populations Activated by the Same Agonist 101

DELWICHE, M. J. and COOKE, J. R., An Analytical Model of the Hydraulic Aspects of Stomatal Dynamics 113

BRAUER, F., Periodic Solutions of Some Ecological Models . . 143

MACDONALD, N., A Polar Co-ordinate System for Positional Information in the Vertebrate Neural Retina 153

GRAY, B. F. and GONDA, I., The Sliding Filament Model of Muscle Contraction. I. Quantum Mechanical Formalism . . . 167

GRAY, B. F. and GONDA, I., The Sliding Filament Model of Muscle Contraction. II. The Energetic and Dynamical Predictions of a Quantum Mechanical Transducer Model 187

Index to Volume 69

Active site-directed and allosteric effectors of regulatory enzymes: The activation of aspartate transcarbamylase by substrate and transition state analogues, 275
Advantage of the specialization of flowers on particular pollinator species, 11
ALBERGHINA, L., Dynamics of the cell cycle in mammalian cells, 633
Ameboid locomotion based on the push–pull nature of gel-to-sol interconversions, A thermodynamic model, 293
Amphibian development, A criticism of catastrophe modelling of the differentiative process in, 721
Analysis of bend initiation in cilia according to a sliding filament model, 87
Analytical model of the hydraulic aspects of stomatal dynamics, 113
Antigen–antibody interrelations, Mathematical model of immune processes II. Kinetic features of, 23
Apter machines, A note on, 685
Aspartate transcarbamylase by substrate and transition state analogues, Active site-directed and allosteric effectors of regulatory enzymes: the activation of, 275

B_{12} biosynthesis and evolution (letter), 381
BABB, S. E. (see PERKINS, D. L.), 293
Bats hang upside down: A biomechanical hypothesis, 625
BECKMAN, R. J. and WATERMAN, M. S., On the random distribution of nucleoli in metabolic cells (letter), 561
BERNSTEIN, H., Germ line recombination may be primarily a manifestation of DNA repair processes, 371
Biological stimulus in determining parameters of drug action, and its relationship to the drug effect: A contribution to the theory of drug action, 265
Biological systems of cellular organization and their computer models, 563
Biopolymer sequences, An encoding technique to facilitate the detection of homologies in (letter), 767
BLUM, J. J. (see LUBLINER, J.), 87
BRAUER, F., Periodic solution of some ecological models, 143
BREMER, H. and CHURCHWARD, G., An examination of the Cooper–Helmstetter theory of DNA replication in bacteria and its underlying assumptions, 645
BRODA, E., Free will and evolution (comments on Young's article), 755

Catastrophe modelling of the differentiative process in amphibian development, A criticism of, 721
Cell cycle in mammalian cells, dynamics of the, 633
Cell cycling, Set-back model of division-synchronization: Optimal spacing of thermal shocks that accelerate, 597
Cell kinetics: A model of stimulated populations, 429
Cell membrane?, Is there a high affinity site for sugar transport at the inner face of the human red, 311
Cellular dynamics, The cyclic AMP control system of development of *Dictyostelium discoideum*, 57
Cellular organization and their computer models, Biological systems of, 563
CERDÁ-OLMEDO, E. (see MEDINA, J. R.), 709
CHURCHWARD, G. (see BREMER, H.), 645
Cilia according to a sliding filament model, Analysis of bend initiation, 87
COHEN, M. S., The cyclic AMP control system in the development of *Dictyostelium discoideum*. I. Cellular dynamics, 57

Cometabolism: A critique, 287
Complexity-stability relationship of two-prey–one-predator species system model: Local and global stability, 613
Complexity, In defense of (letter), 235
Conformational dynamics in biological electron and atom transfer reactions, 239
COOKE, J. R. (see DELWICHE, M. J.), 113
COSTELLO, J. P. (see ROONEY, D. W.), 597
Cyclic AMP control system in the development of *Dictyostelium discoideum*. I. Cellular dynamics, 57

Defense of complexity (letter), 235
